

In the Control Panel, click the **Network and Internet Connections** option, then choose **Network Connections**. *Note: If the Control Panel is in Classic View, double click the Network Connections icon.*

Click the **File** menu and choose **New Connection** to start the **New Connection Wizard**. Click **Next** on the first screen.

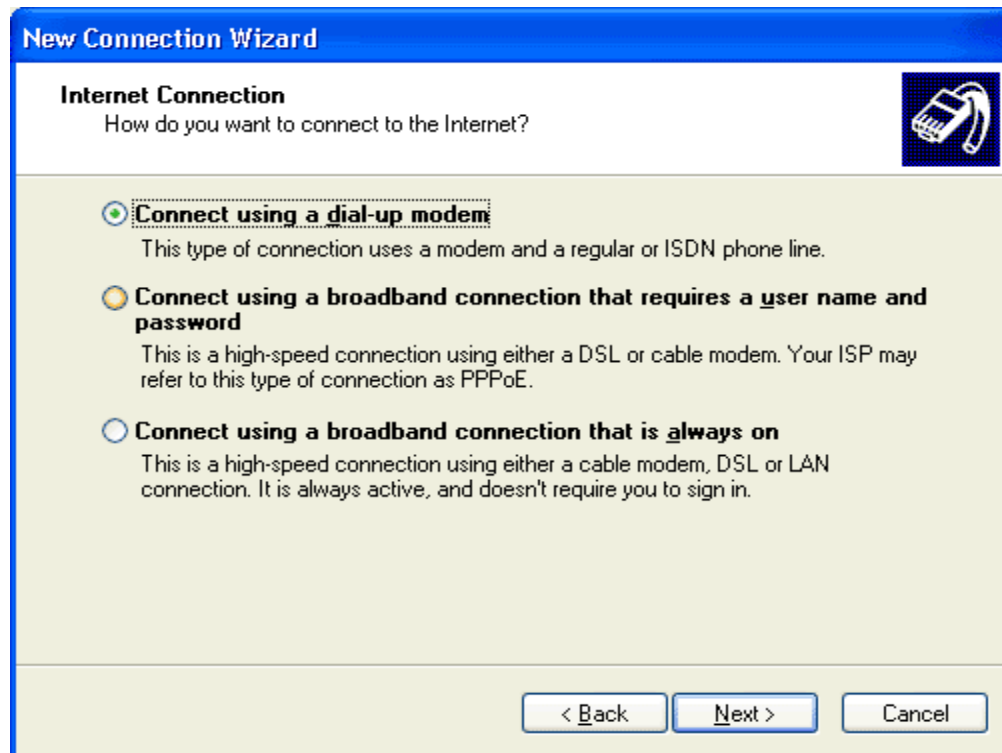

Select **Connect to the Internet** and click **Next**.

Select **Set up my connection manually** and click **Next**.

Select **Connect using a dial-up modem**. Click the **Next** button.

The image shows a Windows XP-style dialog box titled "New Connection Wizard". The main heading is "Internet Connection" with the question "How do you want to connect to the Internet?". There are three radio button options: "Connect using a dial-up modem" (selected), "Connect using a broadband connection that requires a user name and password", and "Connect using a broadband connection that is always on". Each option has a brief description. At the bottom, there are three buttons: "< Back", "Next >", and "Cancel".

New Connection Wizard

Internet Connection
How do you want to connect to the Internet?

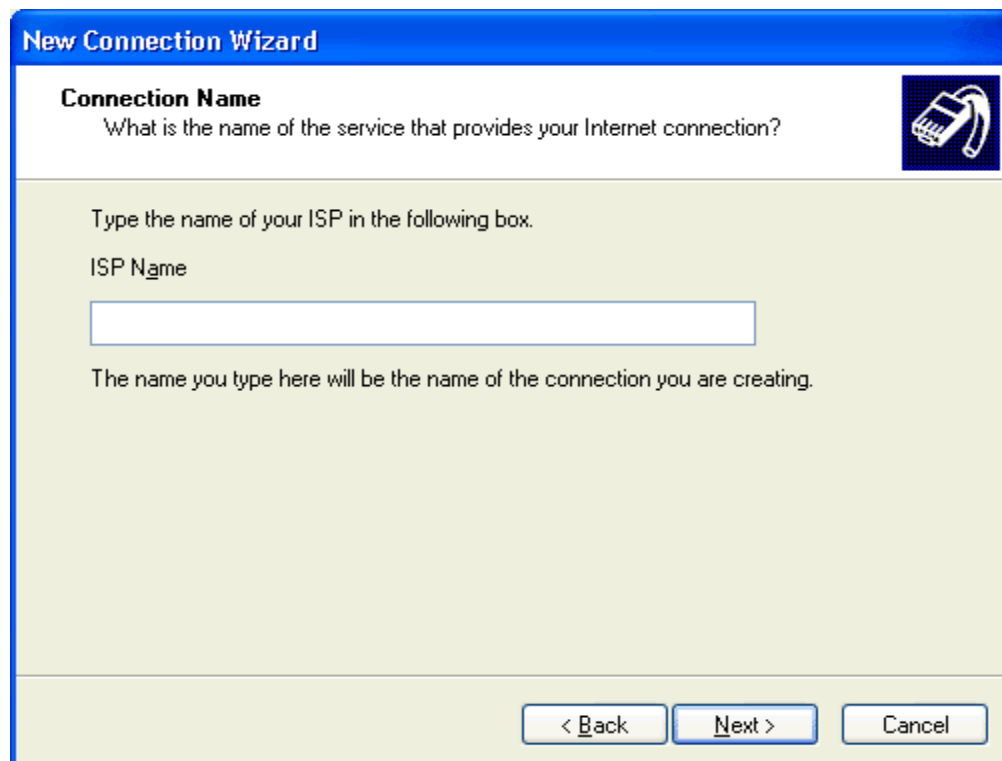

Connect using a dial-up modem
This type of connection uses a modem and a regular or ISDN phone line.

Connect using a broadband connection that requires a user name and password
This is a high-speed connection using either a DSL or cable modem. Your ISP may refer to this type of connection as PPPoE.

Connect using a broadband connection that is always on
This is a high-speed connection using either a cable modem, DSL or LAN connection. It is always active, and doesn't require you to sign in.

In the **ISP Name** field, enter **Expedient** as the name for your connection. Click **Next**.

The image shows a second screen of the "New Connection Wizard" dialog box. The heading is "Connection Name" with the question "What is the name of the service that provides your Internet connection?". Below this, there is a text box labeled "ISP Name" with a single line of input. A note below the text box states "The name you type here will be the name of the connection you are creating." At the bottom, there are three buttons: "< Back", "Next >", and "Cancel".

New Connection Wizard

Connection Name
What is the name of the service that provides your Internet connection?

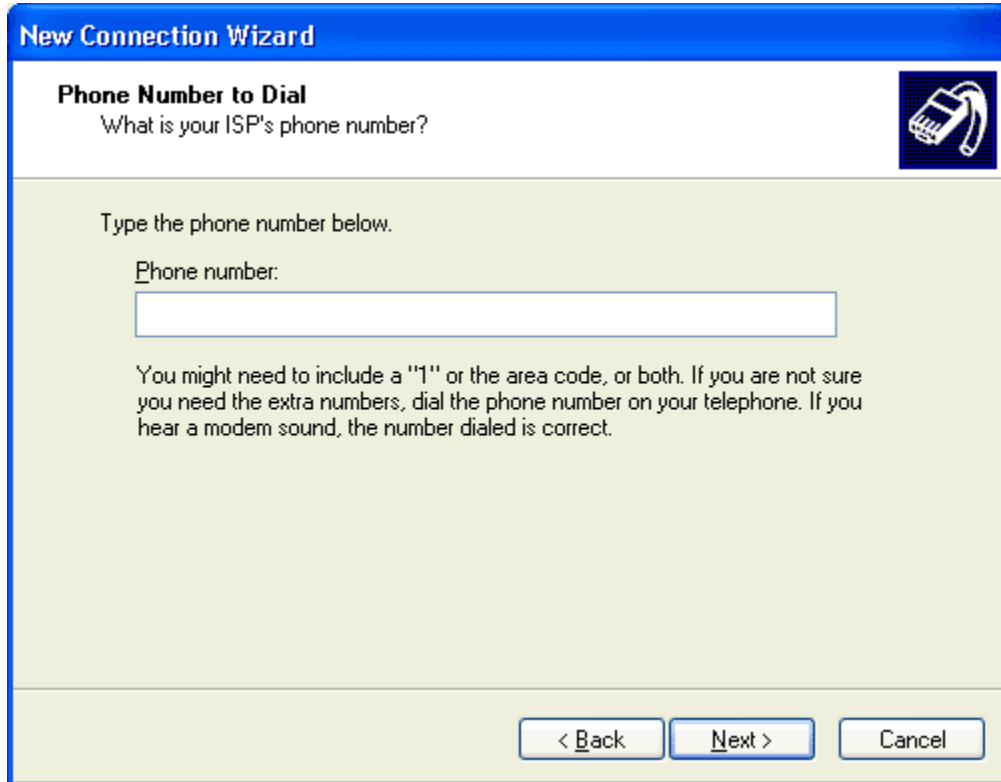

Type the name of your ISP in the following box.

ISP Name

The name you type here will be the name of the connection you are creating.

Enter your [Local Access Number](#) into the **Phone Number** field. Click **Next**.

The screenshot shows a Windows XP dialog box titled "New Connection Wizard". The main heading is "Phone Number to Dial" with a sub-question "What is your ISP's phone number?". There is a small icon of a telephone handset in the top right corner. Below the heading, it says "Type the phone number below." followed by a label "Phone number:" and an empty text input field. A note below the field reads: "You might need to include a '1' or the area code, or both. If you are not sure you need the extra numbers, dial the phone number on your telephone. If you hear a modem sound, the number dialed is correct." At the bottom, there are three buttons: "< Back", "Next >", and "Cancel".

Windows XP - Dialup Connection

If you have already configured your computer to connect and need to check the settings, [click here](#).

To setup your dialup connection in Windows XP:

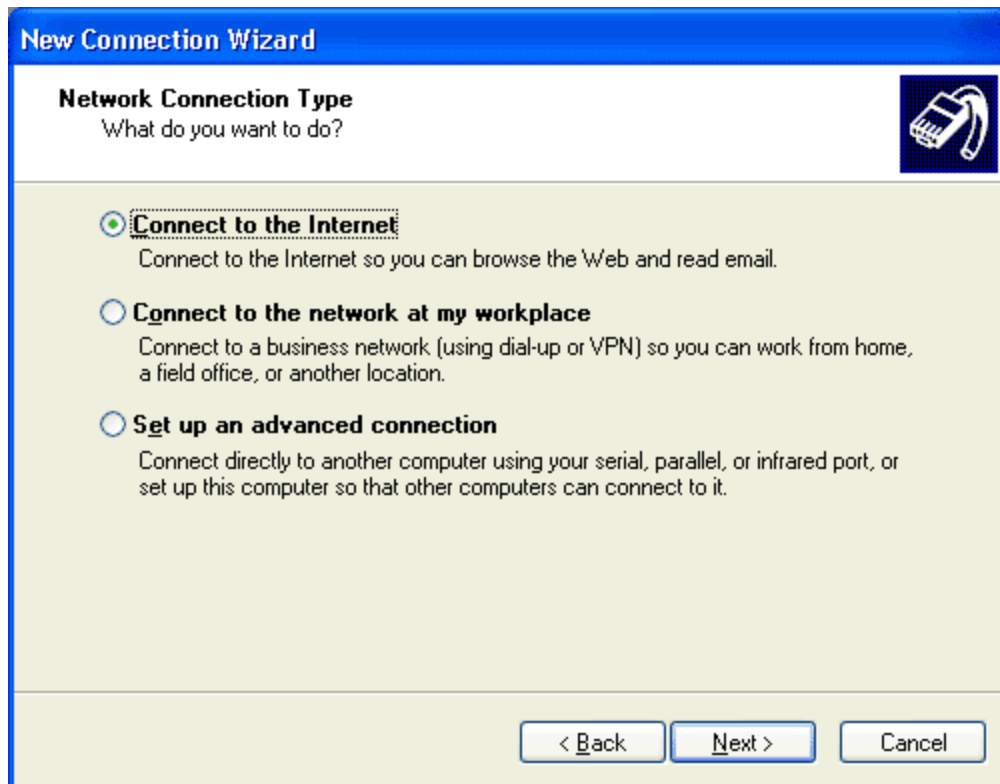

From the **Start** menu, choose **Control Panel**. Double click **Add/Remove Programs** then select **Add/Remove Windows component**. Uncheck the option for MSN explorer. Click **Next**. Close Add/Remove programs.

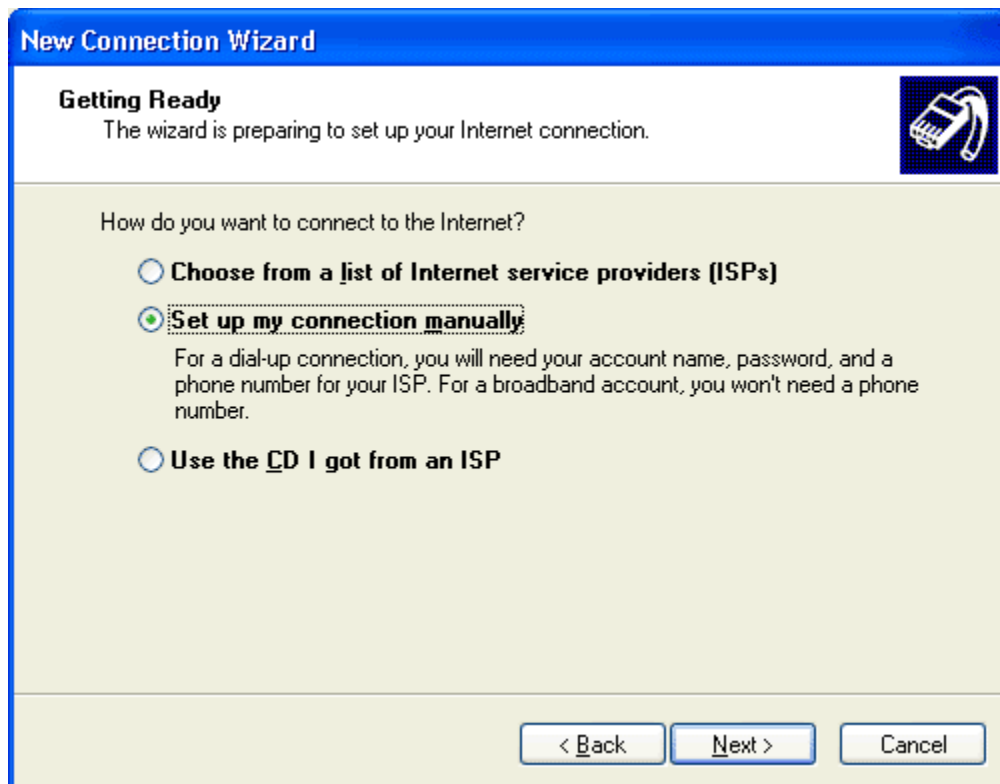

In the Control Panel, click the **Network and Internet Connections** option, then choose **Network Connections**. *Note: If the Control Panel is in Classic View, double click the Network Connections icon.*

Click the **File** menu and choose **New Connection** to start the **New Connection Wizard**. Click **Next** on the first screen.

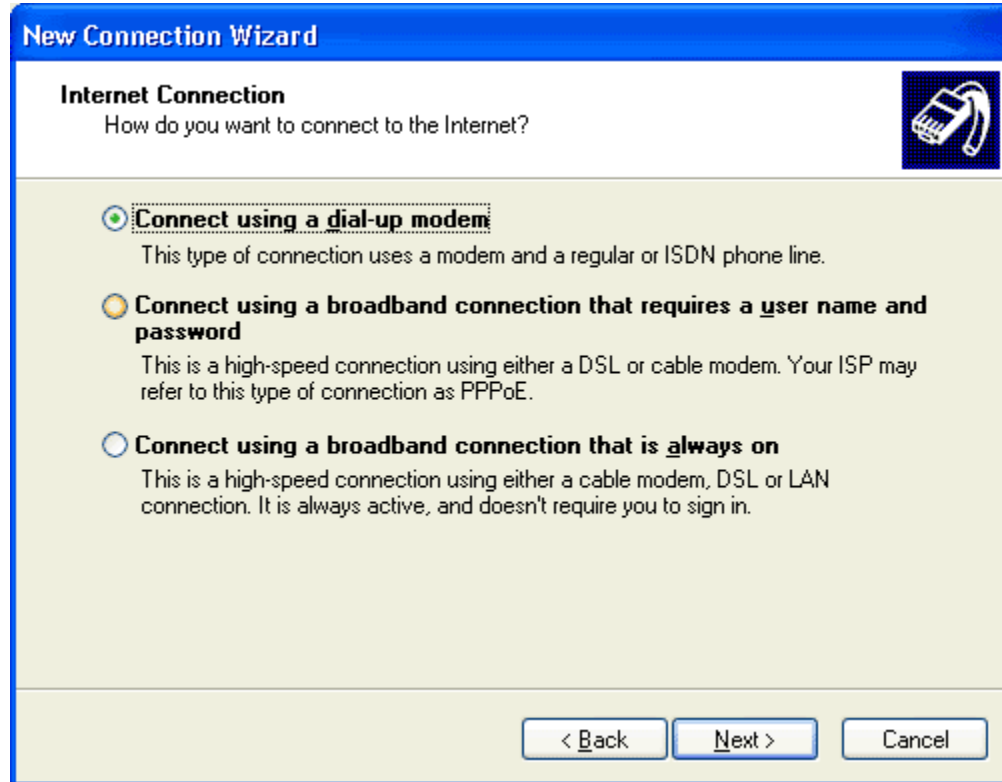

Select **Connect to the Internet** and click **Next**.

Select **Set up my connection manually** and click **Next**.

Select **Connect using a dial-up modem**. Click the **Next** button.

In the **ISP Name** field, enter **Expedient** as the name for your connection. Click **Next**.

< Back Next > Cancel

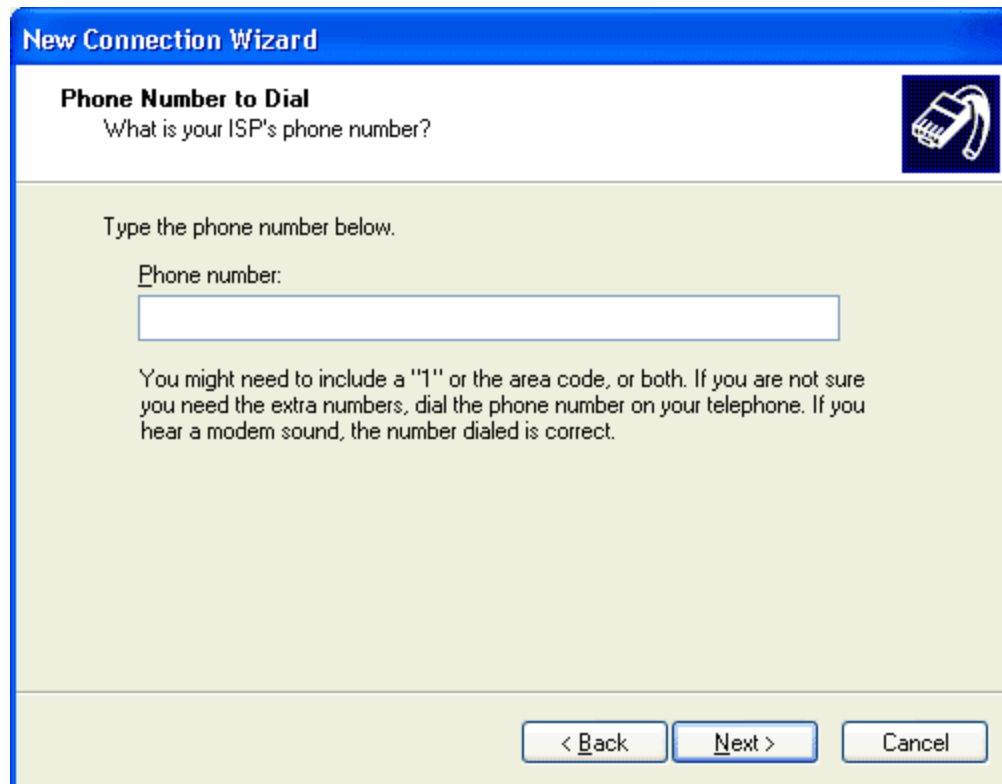

Enter your [Local Access Number](#) into the **Phone Number** field. Click **Next**.

While you can enable Dialing Properties, we recommend you type the entire number INCLUDING properties into the "Telephone Number:" field. The number should be entered exactly as it needs to be dialed. For example, if you need to dial the area code enter the number as **XXX-XXX-XXXX**.

To **disable call waiting**, type in *70, XXX-XXX-XXXX if you have tone dialing or 1170, XXX-XXX-XXXX if you have pulse dialing. Note: Some phone companies use 70# to disable call waiting; if this applies to you, type in 70#, XXX-XXX-XXXX. If you are not sure what your call waiting code is, please contact your telephone company for this information.

If you need to **dial 9 to get an outside line**, enter the number as **9, XXX-XXXX**.

Note: Dashes (-) and spaces are not required, but using dashes can allow you to more clearly distinguish the area code from the exchange and the final 4 digits.
